

JavaScript DOM Practice Tasks

2 beginner-level tasks based on the concepts used in the navbar example

Core concepts

onclick | functions | getElementById() |.textContent | style manipulation | if / else

Task 1 - Color Changer

Create a webpage with four buttons. When the user clicks a button, the page background should change to the selected color.

Buttons

Red **Blue** **Green** **Purple**

Center content

Display the text:

Background Color

Expected behavior

- Click Red -> page background becomes red.
- Click Blue -> page background becomes blue.
- Click Green -> page background becomes green.
- Click Purple -> page background becomes purple.

Concepts to use

- onclick
- A function with a parameter
- document.body
- style.backgroundColor
- Basic DOM manipulation

Suggested function pattern

```
function changeColor(color) {  
  document.body.style.backgroundColor = color;  
}
```

Task 2 - Counter with Different Actions

Create a counter application with three buttons: Decrease, Reset, and Increase. The counter should start at 0.

Buttons

Decrease Reset Increase

Counter rules

- Increase -> 0 -> 1 -> 2 -> 3 ...
- Decrease -> 3 -> 2 -> 1 -> 0 -> -1 ...
- Reset -> counter becomes 0.

Text color rules

- Positive value -> Green
- 0 -> Black
- Negative value -> Red

Concepts to use

- let variable
- Functions
- onclick
- getElementById()
- textContent
- style.color
- if / else

Suggested starting pattern

```
let count = 0;

function updateCounter() {
  let counter = document.getElementById("counter");
  counter.textContent = count;
}
```

Practice goal

These tasks are intentionally close to the navbar example. The main step forward is to make JavaScript control page state and styling, not only replace text.

Recommended order: Task 1 first, then Task 2.
